

VcP is a control panel for video seamless switches and mixers. Designed for remote operation of the switcher this carries out the basic functions. Positive feedback tracks the changes requested from the VcP to the switcher. Up to 10 inputs (including LOGO) can be controlled and a Take button action the command.

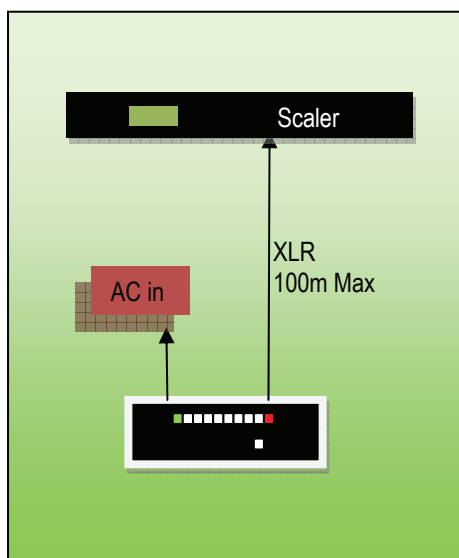

Using serial connectivity over standard XLR cables the infrastructure is kept simple and manageable on presentations and events.

Using green and red indicator buttons, feedback is provided to the user as to which preview (green) and transmission (red) has been selected. Selecting the next input the button will glow green. The Take button also glows red when in a take for the duration of the transition.

Main Features

- Positive feed back
- AC power straight in
- Serial on XLR
- Desk Mounting or "sink in"

3 Year Limited Factory Warranty
